Thank you, Lutify.me Team

INSTALLING LUTS

Installing Lutify.me LUTs into Capture One is a simple matter of copying the appropriate styles from your package into a location on your hard drive.

For Mac operating system please use the styles from the Mac sub-folder of Capture One folder inside your package.

For Windows operating system, please use the styles from the Windows sub-folder of Capture One folder inside your package.

Mac OS Instructions

Step 1 Close Capture One if open.

Step 2

Please copy **both** Raw Styles and JPG Styles folders from following path inside your package:

Capture One > Mac

into following path:

User > Library > Application Support > Capture One > Styles

Step 3 Launch Capture One

For detailed instructions, please see <u>this document</u>.

Windows OS Instructions

Step 1 Close Capture One if open.

Step 2 Please copy **both** Raw Styles and JPG Styles folders from following path inside your package:

Capture One > Windows

into following path:

X:\ Users \ username \ AppData \ Local \ CaptureOne \ Styles50

Step 3 Launch Capture One

For detailed instructions, please see <u>this document</u>.

APPLYING LUTS

Once installed, Lutify.me LUTs will appear as styles in the Styles and Presets tab under User Styles category.

Select the appropriate LUT by clicking on it. Use JPG Styles to apply LUTs on JPG, TIFF or PNG images and Raw Styles to apply LUTs on Raw images supported by Capture One.

Make sure you're applying appropriate type of LUT for the type of image you're working on - JPG Styles for JPG, TIFF or PNG files and Raw Styles for Raw images. Using inappropriate type of LUT will lead to unexpected results as there are substantial differences between the two types of LUTs.

For detailed instructions, please see <u>this document</u>.
